AARUSH WALI

Software Developer | Full-Stack · Cloud · Python · TypeScript

Jammu, J&K • +91 70067 49768 • work.aarushwali@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

B.Tech (CSE – AI/ML) 2026 graduate with production experience across the full software development lifecycle — from requirements and architecture to coding, testing, CI/CD, and cloud deployment. Shipped full-stack SaaS portals, in-browser ML applications, and cloud-native backend systems using Python, TypeScript, React, Node.js, GCP, and AWS. Strong fundamentals in DSA, OOP, DBMS, and OS. Contributor to a patented AI system and author of two peer-reviewed publications.

EXPERIENCE

Software Developer Intern | Straatix Partners Labs Pvt. Ltd.

Jan 2026 – Present | React, Next.js, TypeScript, Node.js, Python, Supabase, PostgreSQL, GCP, Terraform, GitHub Actions, Docker

- Developed and shipped dual-portal SaaS product (React/Next.js) end-to-end — from UI design to backend API integration, database schema, and production deployment on GCP.
- Architected Supabase/PostgreSQL backend with RBAC, SSO, and email-verification workflows; authored serverless TypeScript edge functions for automated data pipelines.
- Led full cloud migration to GCP (Cloud Run, GKE, Vertex AI); provisioned Terraform IaC with strict IAM, security policies, and observability for zero-downtime production deployments.
- Built automated GitHub Actions CI/CD pipelines (keyless, via GCP Workload Identity Federation) covering build, test, and deploy stages across environments.
- Collaborated cross-functionally across frontend, backend, and DevOps domains — independently owning multiple layers of the stack simultaneously.

Director's Internship – Software Engineering & Applied AI | MIET, Jammu

Feb 2025 – Jan 2026 | Python, Scikit-learn, Supabase, PostgreSQL, REST APIs, RBAC

- Engineered the complete software stack for People.ai (patented AI system) — Python ML pipelines, REST API backend, database design, and RBAC-secured prediction-serving layer.
- Designed and validated multi-class and binary ML models (5-fold cross-validation, ROC tuning) and integrated them into a production-ready API used by HR stakeholders.
- Delivered a peer-comparison scoring module and database schema reducing manual evaluation time by 60%, demonstrating impact-driven software engineering.

PROJECTS

EditoDoc – Privacy-First AI Document & Photo Processor | 2025 | Live Demo

React, Vite, TypeScript, Hugging Face Transformers.js, WebAssembly, HTML5 Canvas, pdf-lib, pdfjs-dist, Vercel

- Architected and shipped a production web application with zero backend — all processing (AI inference, PDF manipulation, image compression) runs in-browser via WebAssembly.
- Engineered iterative compression algorithm, canvas-based PDF engine, and custom React hooks for memory management — demonstrating software engineering depth across performance, architecture, and UX.
- Handles 50+ high-resolution images in batch without crashes; meets strict exam-portal specifications (UPSC, SSC, NEET, JEE) for KB/pixel limits.

Thyroid Disease Detection System | 2024

Python, Scikit-learn, Pandas, Data Engineering

- Designed and implemented a complete ML software pipeline — data ingestion, cleaning, EDA, feature engineering, multi-model benchmarking — achieving 95% classification accuracy.

PUBLICATIONS & RESEARCH

- Diabetes Detection and Prediction Using the Machine Learning Paradigm (IEEE) — Benchmarked seven ML classifiers; Random Forest delivered best F1-score and recall for healthcare use.
- Evaluating Booth's Algorithm vs. Vedic Multiplication in Digital Systems (Taylor & Francis) — Algorithmic performance analysis defining optimal hardware contexts for digital systems.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML/CSS
Frontend: React, Next.js, WebAssembly, Hugging Face Transformers.js, HTML5 Canvas
Backend & APIs: Node.js, TypeScript, REST APIs, Serverless Functions, Supabase, PostgreSQL, MySQL, RBAC, JWT
Cloud & DevOps: GCP (Cloud Run, GKE, Vertex AI), AWS, Vercel, Terraform, Docker, CI/CD, GitHub Actions
ML & Data: TensorFlow, Scikit-learn, Pandas, NumPy, Feature Engineering, Data Pipelines
Core CS: DSA, OOP, DBMS, OS, RBAC, IAM, System Design fundamentals, REST API design
Tools: Git, VS Code, Docker, MySQL Workbench

EDUCATION

B.Tech, Computer Science Engineering (AI/ML) | 2022 – 2026
Model Institute of Engineering and Technology, Jammu | CGPA: 8.8/10

CERTIFICATIONS

Neural Networks & Deep Learning • Feature Engineering • TensorFlow on GCP • AI Chatbots (No-Code)
